

Parenteral Nutrition: An Evidence Based Practice Review

KAREN HIGGINBOTHAM RD, LD

Learning Objectives

- To identify appropriate use for TPN
- To determine correct TPN composition for different patient populations
- To recognize side effects and possible contraindications for TPN use

TPN: Indications for Use

- Non functional gastrointestinal tract/Unsuccessful EN attempt
- GI tract cannot be accessed
- NPO status for greater than 7 days in the healthy patient
- In critically ill, if EN is not possible and hypermetabolism is expected to last more than 4-5 days
- Neonates and Infants, if expected to be NPO for more than 2-3 days
- Premature Infants, within the first 24-48 hours of life

TPN: Indications for Use

- Disease State
 - Congenital Heart Disease
 - GI Disease
- Critically Ill
- ECMO – Extracorporeal Membrane Oxygenation
- Cancer – GVHD, radiation enteritis, cachexia
- High output fistulas
- Organ Transplant

TPN: Contraindications for Use

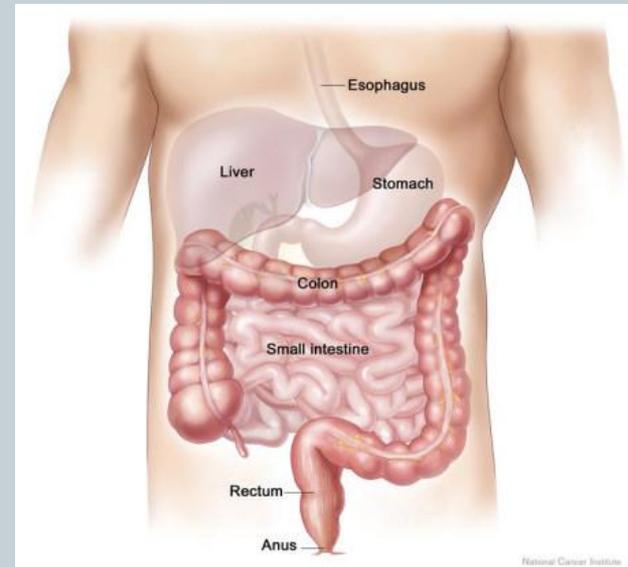

- Functioning GI tract
- Anticipated administration of TPN for < 5 days in adequately nourished patient
- No safe venous access
- No aggressive support desired
- Severe electrolyte imbalance

TPN considerations

- When possible, allow provision of oral diet or trophic enteral feedings or combined EN/PN
- If the gut works, use it!

TPN: Indications to Discontinue

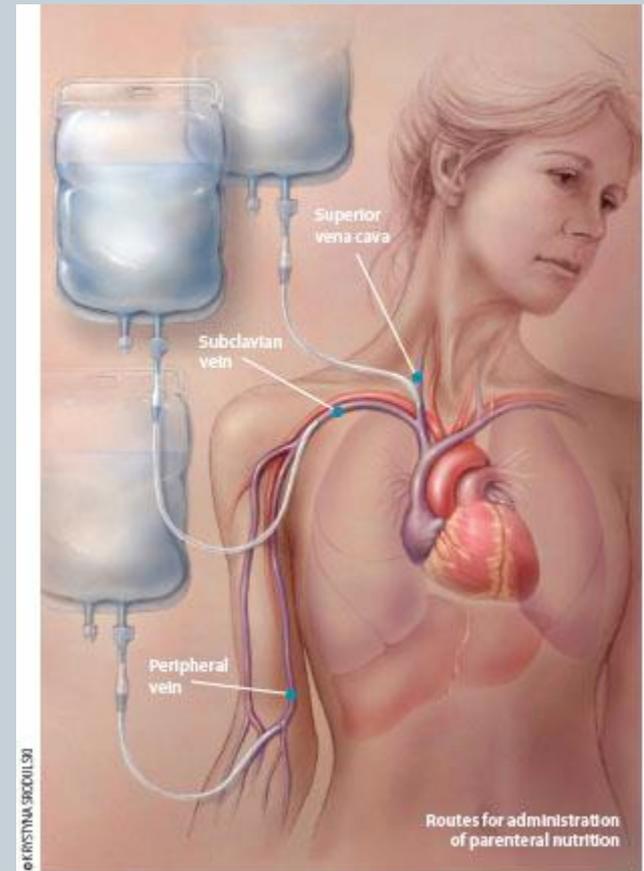

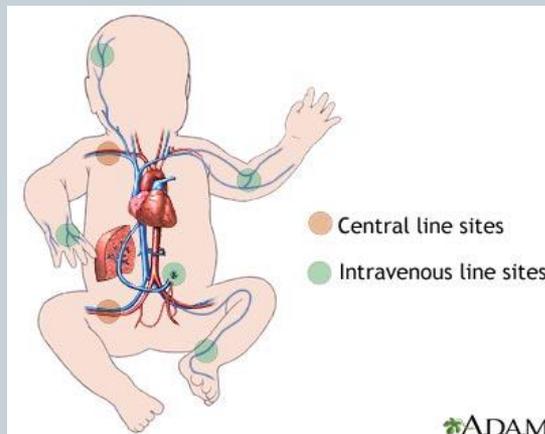

- When patient is able to tolerate enteral nutrition/solid foods by mouth, greater than 60% of needs
- NICU: Decrease PN as EN/PO increases keeping total volume between 150-170 mL/kg. D/C when EN/PO is at 125 mL/kg/day
- Individualized per patient and situation

Parenteral Nutrition Access

- Peripheral
-PIV
- Central (CVAD's)
-PICC
-Broviac, Hickman, Hohn
-Port

Peripheral PN

- 900 mOsm/L
- Dextrose: 150-300g/d (5%-10%) in adults and 10-12.5% dextrose concentration in pediatrics
- Limited nutrition if fluid restriction
- Duration: 5 days to 2 weeks
- Adult Criteria: (1) good peripheral access & (2) tolerate large volumes (2.5-3L)

Macronutrients

- **Protein**

Crystalline amino acids – Essential and Non-Essential

- Trophamine, Aminosyn, Premasol (Peds)
Travasol (Adults)

- 4 kcal/g

- Adults: 0.8-2 g/kg

- Pediatrics: 2-4 g/kg

- ~20% total kcals

Macronutrients

- Carbohydrates – Dextrose
- 3.4 kcal/g
- Needs:
50-70% of total kcals
- Maximum glucose oxidation rate (mg/kg/min)
GIR: $[\text{dextrose (g/day)} \times 1000] / [24 \text{ (h/day)} \times 60 \text{ (min/h)} \times \text{weight (kg)}]$.

Macronutrients

- Fat – IV Fat Emulsion (IVFE) or Lipids
Intralipid, Liposyn III, Nutrilipid
- 10% (1.1 kcal/mL); 20% (2.0 kcal/mL) or 30% (3.0 kcal/mL)
- ~10 kcal/g
- 12 hour hang time
- Usually ~30% of kcal

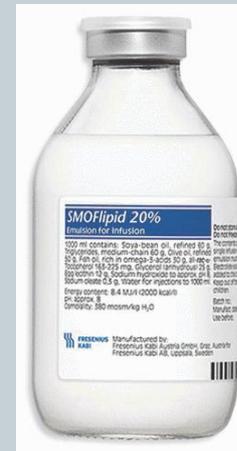

Macronutrients

Fat continued:

- 0.5-1g/kg/day to prevent EFAD
- Omega-3 and Omega-9 Fat Emulsions
- SMOF

Initiation and Advancement of Macronutrients

Infants (<1 y)	INITIATION		ADVANCE BY		GOALS	
	Preterm	Term	Preterm	Term	Preterm	Term
Protein (g/kg/day)	3-4	2.5-3	-	-	3-4	2.5-3
Dextrose (mg/kg/min)	6-8	6-8	1.4-1.7	3.5	10-14 (max 14-18)	10-14 (max 14-18)
Fat (g/kg/day)	0.5-1	0.5-1	0.5-1	0.5-1	3 (max 0.15 g/kg/h)	2.5-3 (max 0.15 g/kg/h)

CHILDREN (1-10 y)			
Protein (g/kg/day)	1.5-2.5	-	1.5-2.5
Dextrose (mg/kg/min)	3-6	2-3	8-10
Fat (g/kg/day)	1-2	0.5-1	2-2.5
ADOLESCENTS			
Protein (g/kg/day)	0.8-2	-	0.8-2
Dextrose (mg/kg/min)	2.5-3	1.2	5-6
Fat (g/kg/day)	1	1	1-2

*The A.S.P.E.N Pediatric Nutrition Support Core Curriculum, 2nd Edition

Initiation and Advancement of Macronutrients

Adult Patient – individualized per assessment

- 30% of calories from fat
- 70% from dextrose and amino acid solution
- Maximum GIR: 5 mg/kg/min
- Lipids: 1-2.5g/kg
- Protein: individualized per need
- Initiate dextrose with $\text{GIR} \leq 3 \text{ mg/kg/min}$

Calculations of Total Calories from PN

- PN volume = PN rate (ml/hr) x hours TPN ordered
- a.) Dextrose Calories: PN volume x % dextrose x 3.4 kcal/g
- b.) Protein Calories: total grams protein/day x 4 kcal/g
Or grams/kg protein x weight x 4 kcal/g
- c.) Fat Calories: Intralipid volume x 1.1 kcal/mL (10%)
Intralipid volume x 2.0 kcal/mL (20%)
- d.) Total calories = a+b+c
- Calories per kg = d/weight

Micronutrients

- Electrolytes
- Vitamins
- Trace Elements – Zinc, Copper, Chromium, Manganese and Selenium

Parenteral Trace Elements Solutions

Ingredient	Adult Trace/mL^a	Pediatric Trace/mL^b
Zinc	5 mg	1.0 mg
Copper	1.0 mg	0.1 mg
Manganese	0.5 mg	25 µg
Chromium	10 µg	1 µg
Selenium	60 µg	NA

^aMultitrac-5 Concentrate

^bMultitrac-4 Pediatric Trace Elements Injection

Parenteral Vitamin Solutions

Ingredient	Adult MVI/5mL ^a	Pediatric MVI/4 mL ^b
Vitamin A	1 mg 3300 IU	0.7 mg 2300 IU
Vitamin D	5 µg 200 IU	10 µg 400 IU
Vitamin E	10 mg 10 IU	7 mg 7 IU
Vitamin B ₁	6 mg	1.2 mg
Vitamin B ₂	3.6 mg	1.4 mg
Vitamin B ₆	6 mg	1 mg
Niacin	40 mg	17 mg
Dexpanthenol	15 mg	5 mg
Folic acid (per mL)	600 µg	140 µg
Vitamin B ₁₂ (per mL)	5 µg	1 µg
Biotin (per mL)	60 µg	20 µg
Ascorbic Acid	200 mg	80 mg
Vitamin K ₁	150 µg	200 µg

Electrolytes - Adult

Daily Electrolyte Requirements

Electrolyte	Parenteral
Sodium	1-2 mEq/kg
Potassium	1-2 mEq/kg
Chloride	As needed to maintain acid-base balance
Acetate	As needed to maintain acid-base balance
Calcium	10-15 mEq
Magnesium	8-20 mEq
Phosphate	20-40 mmol

Electrolytes - Pediatrics

Electrolyte	Preterm Neonates	Infants/Children	Adolescents and Children > 50kg
Sodium	2-5 mEq/kg	2-5 mEq/kg	1-2 mEq/kg
Potassium	2-4 mEq/kg	2-4 mEq/kg	1-2 mEq/kg
Calcium	2-4 mEq/kg	0.5-4 mEq/kg	10-20 mEq/day
Phosphorus	1-2 mmol/kg	0.5-2 mmol/kg	10-40 mmol/day
Magnesium	0.3-0.5 mEq/kg	0.3-0.5 mEq/kg	10-30 mEq/day
Acetate Chloride	As needed to maintain acid base-balance

TPN- Additives

- Medications
- Carnitine
- Cysteine

TPN Solutions

- 2-in-1 Solution
Dextrose and Amino Acids
Lipids administered separately
- Total Nutrient Admixture (TNA)
Also called 3-in-1 or all-in-one
Contains dextrose, amino acids and lipids together
- Premixed Formulations

Cycling TPN

- Prevent hypoglycemia, hepatotoxicity and PNALD
- 20 to 8 hours depending on patient needs
- Taper 1-2 hours on and off

Calculation:

- A.) Total TPN volume per day
- B.) Total cyclic infusion time minus 1 hour (if using 1 hr on and off taper)
- C.) rate of taper

total volume (A) divided by infusion time in hours (B) = full rate of non taper time.

To obtain taper rate, divide full rate (B) by 2 = rate of taper up and down for 1 hour.

Example:

1. $600 \text{ mL total volume} / 15 \text{ hours} = 40 \text{ mL/hr}$
2. $40 \text{ mL} / 2 = 20 \text{ mL/hr}$

TPN order: total volume 600 mL cycled over 16 hours at 40 mL/hr with 1 hour taper on and off at 20 mL/hr

TPN Monitoring

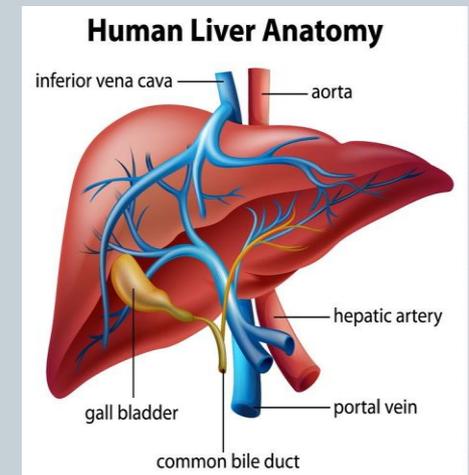

- Anthropometrics and Growth
- I's/O's
- Electrolytes – daily then twice per week if stable
- LFT's, Triglycerides – weekly if stable
- Glucose – individualized as needed
- Vitamins – baseline then every ~3-6 months

TPN Complications - Adults

- Refeeding Syndrome
- PNALD
- PN Associated Cholestasis (PNAC) & Gallbladder stasis
- Trace element deficiencies or toxicities

TPN Complications – Pediatrics

- Central Line-Associate Bloodstream Infections
- Aluminum Toxicity
- Iron Deficiency
- Metabolic Bones Disease
- Parenteral Nutrition Associated Liver Disease (PNALD)

TPN- Safety

- High Alert medication
- Policies, Procedures and Protocols
- PN product shortages
- A.S.P.E.N. PN safety toolkit

<https://www.nutritioncare.org/public-policy/product-shortages/>
- FDA Drug Shortages mobile app
- A.S.P.E.N. Safety Consensus Recommendations, 2014

Home TPN

- Stable
- Cyclic TPN
- Discharge planning – home health care company, patient/caregiver education, home assessment
- Outpatient follow up with interprofessional team (MD, RD, PA/NP, RN, Pharmacist)
- Monitor lab trends
- Daily administration of vitamins and other additives
